

Why do you think we need to change anything with Satellite radio. Where has the so-called national radio been all of these years. I have put up with senseless garble from every radio station until I started receiving Satellite radio. I pay for the privilege to listen to Satellite Radio without any commercial interruptions. I can get weather , traffic conditions and just about anything I want to listen to on this radio. I would think that the Federal government would thank the developers of Satellite radio for their contributions instead of restricting them in their broadcasts. The other radio stations should pay heed and realize what the public wants. Please reject NAB's petition 04-160 and leave well enough alone. Thanks
Roy Banning
